

EDUCATION

Vellore Institute of Technology <i>Bachelor of Technology - CSE with spl in AI and Robotics; CGPA: 9.26</i>	Chennai, India Aug 2021 - Jun 2025
Narayana Junior College <i>Maths, Physics, Chemistry; Percentage: 97.8%</i>	Hyderabad, India Jun 2019 - Apr 2021
Montessori High School <i>State Board of Telangana Education; CGPA: 9.7</i>	Alampur, India Aug 2021 - Jun 2025

TECHNICAL SKILLS

- Languages:** Python, C++, SQL
- Frameworks:** Scikit-learn, TensorFlow, PyTorch, HuggingFace, Langchain, RAG
- Developer Tools:** GCP, AWS, VS Code, Kaggle, Google Colab, Git/Github

EXPERIENCE

Quantiphi Analytics <i>Machine Learning Engineer</i> - Developed an ML pipeline to predict gamer churn with 78% precision, enabling targeted retention strategies. - Finetuned LLMs for de-identification of PHI information from clinical notes, achieving 90% recall with an average inference latency of 0.35s per chunk, optimizing both accuracy and performance. - Deployed scalable BQML pipelines to orchestrate automated ETL and model training directly within BigQuery, yielding 40% faster inference and improved MLOps automation.	Jul 2025 - Present Bangalore
Quantiphi Analytics <i>Machine Learning Engineer Intern</i> - Engineered a YOLOv11-based object detection system to quantify the visibility of Paytm logos in cricket broadcasts. - Delivered 92.2 mAP for Paytm logo detection and 96.7% accuracy for visibility classification using VGG16. - Built a Streamlit-based interface enabling automated visual analysis to quantify full and partial Paytm logo exposure.	Jan 2025 - Jun 2025 Bangalore
Vit Chennai <i>Research Intern</i> - Architected a dual-track deep learning model for grape leaf disease classification using Swin Transformer and GSRDN. - Elevated accuracy to 98.6% with 30% fewer parameters, enhancing efficiency in plant disease detection and classification. - Contributed to peer-reviewed publications in Scientific Reports with an Impact Factor of 3.8.	Aug 2023 - Dec 2023 Remote

PROJECTS

Split-DoRA <i>Split-Federated Learning, Distributed Computing, DoRA fine-tuning, LLMs</i> - Researched a U-shaped split learning framework for GPT-2 by partitioning it into head, tail, and body, strategically placing both head and tail on the client side to ensure 100% data and label privacy. - Leveraged DoRA fine-tuning to enhance adaptation quality, achieving a 20-30% lower accuracy gap compared to LoRA.	Jan 2025 - May 2025
Bitcoin Price Prediction using News and OLHCV data <i>Time Series Forecasting, Transformer models, Financial data analysis, Web scraping</i> - Proposed a multimodal DL model trained on 131,684 news articles extracted from CommonCrawl news data and 4 months of OLHCV data from Oct 2021 to Jan 2022 for Bitcoin forecasting. - Employed GPT3.5-turbo for summarization and CNN-based Transformer encoders to model temporal market trends. - Achieved 0.001 MSE and 7% MAPE, accurately forecasting a major bull run in Jan 2023 hours in advance.	Apr 2024 - Oct 2024

CERTIFICATIONS

Google Cloud Associate Cloud Engineer (Cloud Computing) <i>Associate Certification</i>	Certificate Mar 2025 - Mar 2027
AWS Certified Cloud Practitioner (Cloud Computing) <i>Foundation Certification</i>	Certificate Dec 2023 - Dec 2026
